

VersaCoater™ PhotoMate 17" and 24"

A compact footprint compatible with photo, inkjet and digital presses such as iGen/Indigo/DocuColor/NexPress, the PhotoMate protects and adds value to your clients' photo albums and images. Ideal for digitally printed school pictures, wedding portraits, black and white head shots, book covers and virtually anything in between, this compact coater delivers clean, dry prints at high volume and low material cost. Rigid or flexible coated photo paper or other digital media up to 13mm thick (1/2-inch) can be coated with the PhotoMate. Automated start up and shutdown, automatic drain, and UV lamp ready monitor and a filtered coating recirculating system all make operating the PhotoMate efficient at managing project production easier.

VersaCoater™ DocuMate Plus 13" and 20"

The VersaCoater™ DocuMate Plus features both pre and post coat conditioning stations and multiple supply tanks, making this the ultimate user friendly micro format UV coater for on demand print shops. Compatible with traditional offset, litho, digital press and photographic output, including wax infused low melt toner systems like the Konica Minolta C6500 printer, this easy-to-use machine features variable coating thickness control for cut sheet materials up to 120 pound cover weight (350gsm). The DocuMate Plus employs an innovative UV lamp monitoring system to indicate when the coater is ready to use, assuring optimal cure and finish durability. Multiple supply canisters make coating changeover quick, clean and efficient. Compact footprint, low staff training costs, and low maintenance costs make the VersaCoater™ DocuMate Plus an excellent value for print shops wanting multi-featured UV curable coating capabilities at a low price point.
